Questions from the Audience

A large steel arch bridge, likely the Bix Creek Creek Bridge, spans across a body of water. The bridge features a prominent steel truss arch structure supported by several large concrete piers. The scene is captured during sunset, with the sky transitioning from a deep blue on the left to a bright orange and yellow on the right. The sun is low on the horizon, creating a strong silhouette effect on the bridge and the surrounding city skyline in the distance. The water in the foreground is dark, reflecting the colors of the sky. A small boat is visible on the right side of the water.
